

What a beautiful winters day 🌞 for #MathsBookClubWA today.

The Best Writing on Mathematics 2021 contained so many wonderful insights with a plethora of short readings 📖 from a range of authors we were all happy 😊 book club members, glad to have read this book.

From Lockdown Mathematics - the benefits of goal on gaining time from distractions for mathematical breakthroughs, cryptocurrencies, Nullstellenfont, hyperbolic flowers, the bicycle paradox, dark data and the 'oral exam' with Terence Tao, and how near failure propelled him to succeed, advice for Maths supervisors and so much more...

Each short reading takes no longer than 30 mins ⌚ so is a perfect addition to a time poor lover of mathematics collection.

Unfortunately, 2021 will be the last publication, however with another 11 volumes going back to 2010 (a whopping total of 400 authors and 293 writings).

You never know, one of the older volumes may make its way to our reading list in future.
